

Preface

It is our pleasure to publish the first issue of the second volume of The International Journal of Tropical Veterinary and Biomedical Research (*Int. J. Trop. Vet. Biomed. Res.*). In this new issue we published seven manuscripts. These articles exemplify the analysis and exploration of using advance technology for safety of food from animal origin as well as the observation of animal behaviour and economic analysis of farming business. In addition, several articles are also discussing parasites infection and reproductive hormones. Therefore, the results of studies published in this issue could be use as an alternative for future technology development of animal industry.

The articles in this issue are the result of submission papers by authors on topics of current interest in basic and applied studies that have potential to lead to improvements in the food safety of animal origin and disease control. A vast amount of papers were received and extensively reviewed and only 7 peer-reviewed manuscripts were accepted.

The editors of this issue hope that the research findings from the authors could be applied under commercial settings, and will enhance both the level and the efficiency of processing food of animal origin.

We hope that authors, colleagues, and readers could appreciate all the time and effort expended in preparing this issue. We hope you find this new issue of The International Journal of Tropical Veterinary and Biomedical Research as a valuable resource.

May 2017
