**Abstract:** The digital age became a time of many technological and scientific advancements, especially in the world of education. Technological innovation in education has given a new face to the growing and growing learning of today's world. From the medium of conventional learning to the present, it was combined with various technological means. The rapid influx of technological innovations, whether technology in general or technology in the field of makes the impact it produces so significant. Yet while technology and Internet networks are so powerful, it leaves room for the evil that moves within. Because of the lack of digital literacy as a snack for the use of existing technology and the misunderstanding of Muslim education in digital media use as a learning medium and tend to be misunderstood, there is abuse.

**Abstrak :** Abad digital menjadi sebuah zaman yang dipenuhi dengan berbagai perkembangan ilmu pengetahuan dan teknologi khususnya dalam dunia pendidikan. Inovasi teknologi dalam pendidikan telah majunya wajah memberi baru bagi tumbuh kembang dan pembelajaran di era saat ini. Dari media pembelajaran konvensional hingga kini dipadukan dengan berbagai macam sarana teknologi yang bervariasi. Pesatnya arus kemajuan teknologi baik teknologi pada umumnya ataupun teknologi dalam bidang pendidikan membuat dampak yang dihasilkan begitu signifikan. Namun ditengah pengguna teknologi dan jaringan internet yang begitu tinggi hal ini justru memberikan ruang bagi kejahatan yang bergerak didalamnya. Oleh karena kurangnya literasi digital sebagai bekal dalam pemanfaatan teknologi yang ada dan ketidakpahaman peserta didik akan hukum dan pandangan pendidikan Islam dalam penggunaan media digital sebagai media pembelajaran dan cenderung disalahpahami, maka terjadilah penyalahgunaan.

## **INTRODUCTION**

In today's era, all social classes are already aware of digital technology. Increasingly sophisticated digital functions in the world of education have undergone extensive changes. Education is one of the efforts to promote the quality and potential of individuals to progress in a better direction. So it is with the education that is renewed from time to time with a view to improving education at every level. All aspects of the education were renewed based on the needs of the appropriate learners. Development time or era. Today is called education in the era of technology based by reform.

The role of technology in education is manifest in the learning media. The learning media that uses technology today is known for digitally based education, where digital is the primary medium as the instrument for the implementation of education. This article will expose about Student softskill reinforcement through enhanced digital literacy of islamic perspectives and infrastructure.

## **REASEARCH METHODS**

Research methods come from a word "method" that has the correct way of doing things. Whereas research is "an activity of search, logging, formulating to analyze to compile a report." In this study, we used literature review (SLR) study methods. Literature review (SLR) is a term used for identification, evaluation, and interpretation of all available research that is relevant to the problem formulations or topic areas studied. "Calderon and ruiz 2015.

## **Descriptive analysis methode**

Data analysis is a data processing process that aims to find useful information that can provide a basis for decision-making on the solution to a problem. This process of analysis involves grouping data by their characteristics, doing data cleanup, transforming data, creating data models to find important information from the data.

A descriptive analysis method is research that attempts to describe current symptoms, events, events. Descriptive research focused on the actual problem as it was at the time of the actual. By descriptive research, researchers have described events and events that are the center of attention without giving particular behavior to the event.

## **DISCUSSION**

What is soft skills or a non-technical ability?

A softskills or non-technical skills is the ability of a person who relies on IQ and the left brain, it focuses on science or technology. Softskills skills are a critical aspect of producing competitive and successful graduates (Wagiran, 2014).

Soft skills are the skills and abilities of life, both for yourself, for group or in society, and for the creator. Soft skills make one's existence known amidst society. Communication skills, emotional competence, language competence, group competence, ethics, morals, adab and mental skills.

According (Firdaus, 2017). Softskill is knowledge or skill in nonacademic or subjective fields, among other things: understanding values, arts, encouragement (motivation), adaptation, communication, teamwork, problem solving, stress management and leadership from within humans to catalyze their abilities.

And as education and the demands of the working world of students are not required to have high or capable hardskills but it also requires an intellectual capacity attached to each individual and it is also called a soft skills or a non-technical ability.

One example of soft skills that students must possess is the ability to adapt, in this ever-growing age a new breed of things that can improve many things in education or in the industrial or corporate world, and students are required to adapt as the ages grow. As the changing environment of education changes over time which in the past era of writing or recording materials USES only paper and other writing materials and today for writing materials has already been converted to computers or other electronic devices that make it easier for students to store important things in the world of education, And students are required to adapt and be able to solve or resolve a new problem or problem that they will face.

Students are required to have critical thoughts and critical minds as well as a sample of the softskills needed today, decision making is one of the softskills a student needs. Decision making or what might be simply called

preferential decision or action is usually required when a student or someone is confronted by multiple choices or two choices and in the world of education.

And the decision-making world of decision making is a problem-solving process in which decisions are made to find or choose the most likely solutions to the problem, And the process must be idle and must be used by the process of problem identification and coupled with objective thought because whatever decision one chooses on the matter will have a good effect on one's own or if he is a leader will impact his subordinates, and both in education and the work world can work in teams or can be called team work is a soft skill that is vital, Team work is the ability to build a relationship, interact and work effectively with others. The ability to understand and serve in accordance with his role either as a leader or a member.

Generally students already have basic soft skills on each individual they therefore need a soft skills for students to be prepared for industrial progress and the educational world, and there are many ways to reinforce the soft skills of students, one of which is using digital literacy.

Digital literacy is one of the main programs to provide teaching and defense efforts especially for students to develop their soft skills. Today, students grow in an era where information becomes an explosion of real communication. They are required to live in an age of digital society, where smartphones, social media, videos, animation, and so on are required that

they become experts at mastery over them.

They are required to live in an age of digital society, where smartphones, social media, videos, animation, and so on are required that they become experts at mastery over them. Therefore, today understanding digital literacy is vital, for digital literacy is now just as important as any other science. Students who grow up with unrestricted access to technology make their patterns not the same as their previous generations.

According to his involvement in using media, students belong to the Internet generation. According to Tapscott (2009), Internet generations are the ones who actively participate in the use of media. In media use, students are ranked as high in Internet use in Indonesia by the census of the Indonesian Internet service association 2016.

Digital literacy is an effort to understand how the media influences the activities associated with literacy. The life of students in today's world might not be supposed to win without even the use of gadgets or commonly called mobile phones, especially for the time being it has gone from one that seems like the need to be just an expensive event to the basics. In order to become a solution for student activities that are not apart from the digital world, there must be a digital literacy ability in students well because if a student's digital literacy ability is not good or bad, it has a psychological impact on the students.

Today in the college world, digital literacy is recognized as the rapid technological stabilizers it is today. Because mere academic achievement is not enough. It must therefore be offset by seeking the benefits of digital literacy to meet the challenges of The Times. Digital literacy also becomes student media to seek online learning references. Digital literacy also keeps students adept at critical thinking in order to deal with a problem, work together, communicate easily with others, and learn if they use digital literacy well. Institutions of education and technology, therefore, cannot be denied that they are both influential and dependent or in need of one another, because digital literacy is so critical to college life.

The concept of digital literacy will also continue to grow, according to government direction through the establishment of the language body, for the present time the national literacy of the six aspects, the literacy, numeration, science, finance, digital, and cultural citizenship. The six aspects were encouraged to remain culled from the lowest educational ranks to colleges. Therefore, generations growing up with unrestricted access are expected to utilize the technology to suit its needs. Everyone should be able to continue improving abilities in digital literacy. It is also due to digital literacy as well as a backing to a person's process of developing and of searching for as much knowledge as possible without time and space constraint.

## CONCLUSION

A softskills or non-technical skills is the ability of a person who relies on IQ and the left brain, it focuses on science or technology. Softskills' planting is a crucial aspect of producing competitive and successful graduates.

Soft skills are the skills and abilities of life, both for yourself, for group or in society, and for the creator. Soft skills make one's existence known amidst society. Communication skills, emotional competence, language competence, group competence, ethics, morals, adab and mental skills. Comply. Softskill is knowledge or skill in nonacademic or subjective fields, among other things: understanding values, arts, encouragement, adaptation, communication, teamwork, problem solving, stress management and leadership from within humans to catalyze their abilities. The ability to understand and serve in accordance with his role either as a leader or a member.

Generally students already have basic soft skills on each individual they therefore need a soft skills for students to be prepared for industrial progress and the educational world, and there are many ways to reinforce the soft skills of students, one of which is using digital literacy. Digital literacy is one of the main programs to provide teaching and defense efforts especially for students to develop their soft skills. The life of students in today's world might not be suppose to win without even the use of gadgets or commonly called mobile phones, especially for the time being it has gone from one that seems like the

need to be just an expensive event to the basics. In order to become a solution for student activities that are not apart from the digital world, there must be a digital literacy ability in students well because if a student's digital literacy ability is not good or bad, it has a psychological impact on the students.
